eXtra4-labelM1 Software
for Label Printing with Apple MAC

Industry-specific labelling for jewellery and watches

Precise printing of jewellery labels via MAC – entirely without time-consuming label design!

Labelling software eXtra4-labelM1 communicates directly with the printer in its control language. So you can get started right away! With the help of exact coordinates, you can print even the smallest labels: simply enter the data in a ready-to-use label layout and print it. You pick the design you want instead of having to go to the trouble of creating it yourself.

The intuitive ease of use of the software will suit your habits as an Apple user. Even the printer installation is done for you by eXtra4-labelM1 as soon as model and device type are named to the software. On a push of a button it is indicated: system ready for label printing!

- Directly programmed on an Apple system
- Compatible with the new M processors
- For operating system Mac-OS in current versions
- Ready-made label designs for maximum data volume with optimum readability
- Automatic generation of barcode and matrix code
- Printing of your logo along with item data
- Printing of single labels without label loss by printer's feed after each print job
- Start-up assistance included via online support

# eXtra4-labelM1 Label Printing for Apple MAC Computer

Type'n Print – Straight to print

The ready-to-use label designs are activated as a layout for the desired label shape. They contain the entry fields where a user enters the data to be printed on the label.
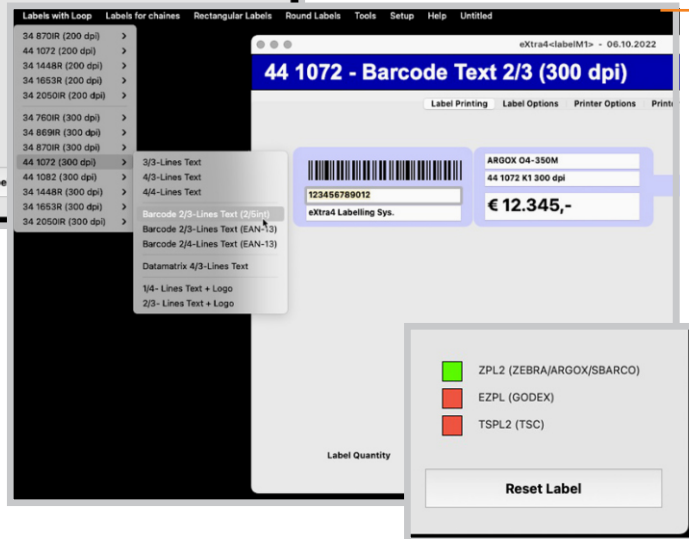

Picking suitable label layouts

Precision is guaranteed when printing labels with eXtra4-labelM1 without users having to do anything themselves. The basis for this are predefined label designs. When selecting them, the „printer traffic light" ensures that only designs are suggested to the user that fit the desired label and can be processed by the stored printer model: Red indicates "Not usable", green signals "Suitable for the printer".

Predefined text as label content

Filling entry fields without typing can be done with text presets. As soon as the label layout is called up for data entry, the entry mask appears with already filled in entry fields. The stored text only needs to be corrected in details, e.g. data for weight and heigh.
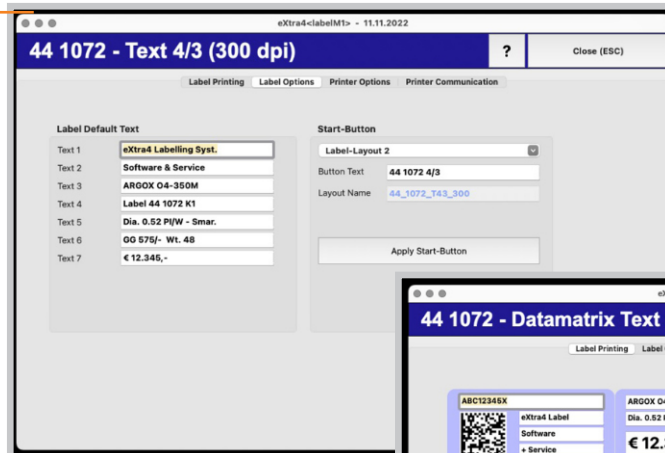

Barcode generation

eXtra4-labelM1 creates a barcode or matrix code from an item number and controls its printing. Into what code an item number is converted by the software depends on its structure and the selected label layout.
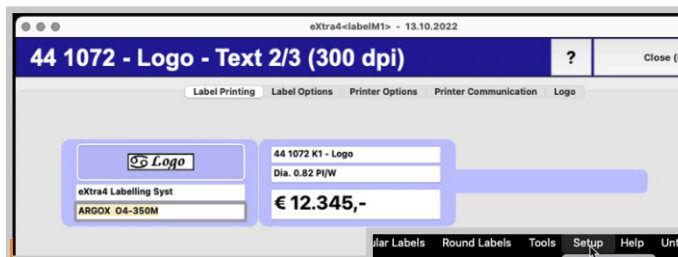

Logo printing

Users can add their own company logo to labels. The software copies the signet as a bitmap graphic into the data entry mask and transfers it permanently to the printer memory. There it is ready for printing on the label when data is printed out.
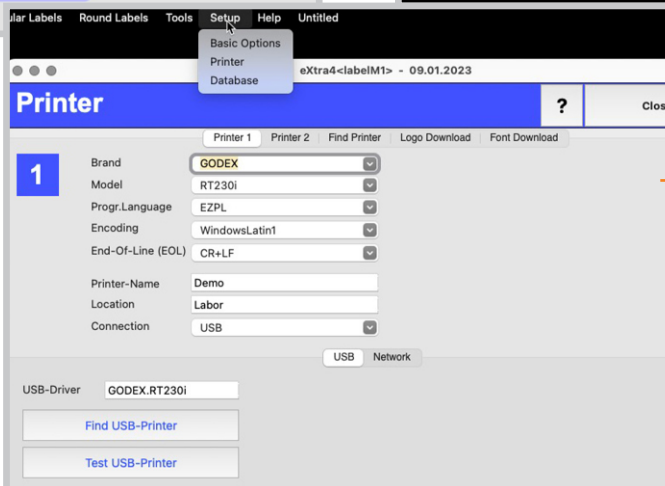

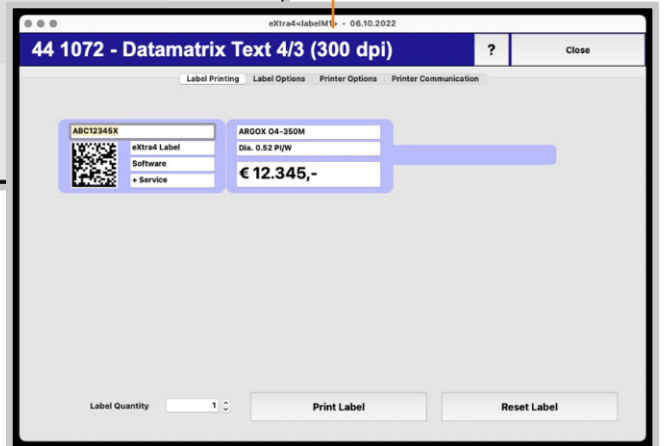

Printer management

The software carefully guides users when they connect their devices to eXtra4-labelM1. At the push of a button, it locates the connected printer and signals its readiness for use.

As software for label printing, eXtra4-labelM1 is optimally tailored to labels and hardware from eXtra4 Labelling Systems. The expertise of Ferdinand Eisele GmbH as a label manufacturer and dealer/distributor of suitable thermal transfer printers and identification code scanners ideally complements the experience of eXtra4 Software + Service GmbH from over 25 years of software development.

The eXtra4 brand combines industry expertise with technical know-how and provides labelling systems for jewellery and watches. Jewellers and goldsmiths, manufacturers and retailers alike will find industry solutions from a single source that are specially designed to meet their individual needs.
